

Identity and Ransomware Protection or Modern Threat Protection

What it is:

A service to strengthen protection across modern attack paths

CISOs

SOC Leaders &
Incident Response
Teams

Identity, Endpoint &
Cloud Security

Why it matters

Compromised credentials, SaaS persistence and privileged access can enable attacks to move across identity, endpoint and cloud environments. Isolated alerts make the attack path harder to understand and contain. Connecting security context with operating processes helps organisations investigate threats, control access and sustain protection as their cyber capabilities mature.

Operationalise unified threat protection to
strengthen visibility, response and resilience.

What it does: Strengthen protection across modern attack paths

Correlate identity, endpoint and cloud telemetry

Uncover attack paths that traditional tools may miss.

Detect and investigate threats faster

Reduce attacker dwell time and limit business impact.

Prioritise high-risk incidents

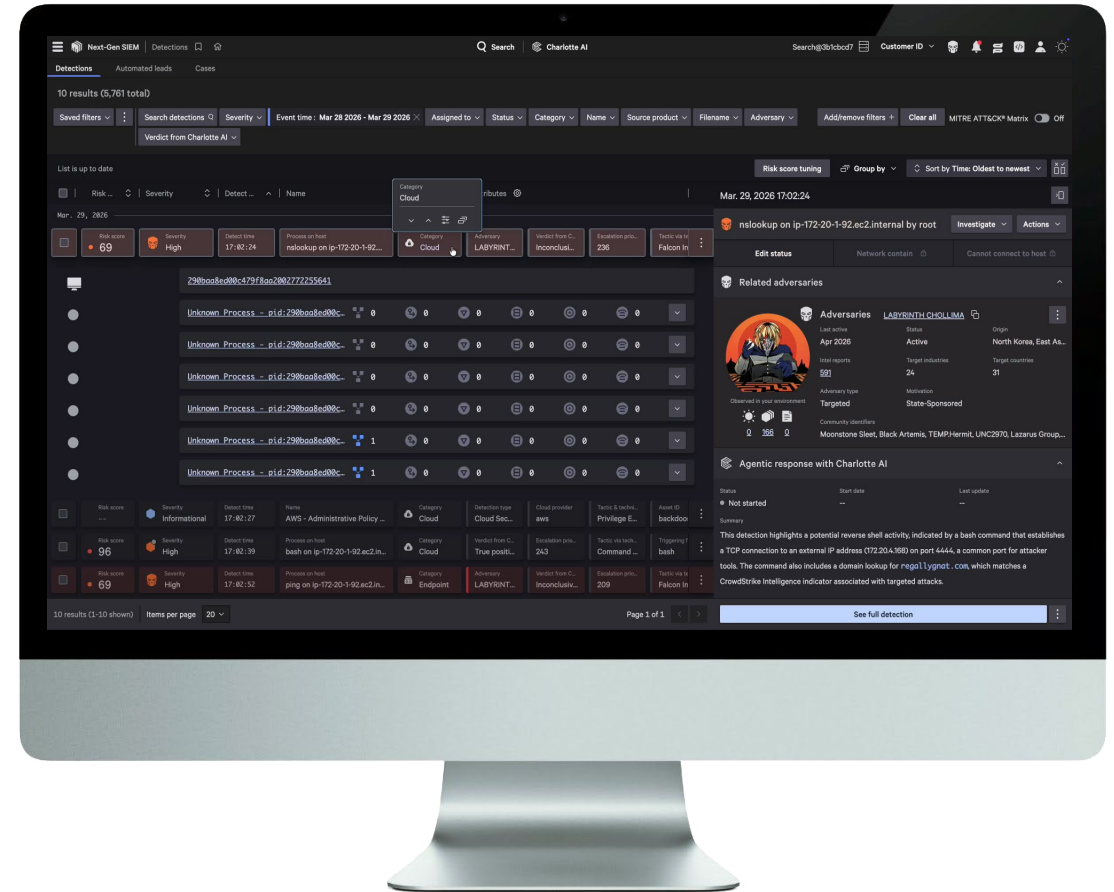

Focus on the threats that matter most.

Operationalise response workflows

Contain threats before they escalate into major incidents.

Benefits

- Unified visibility across identity, endpoint and cloud
- Faster detection and containment of threats
- Reduced exposure to modern attack campaigns
- Higher SOC productivity and operational efficiency

How it works: Demo

Input

Priority use cases, security environments, operating processes and existing protection needs.

Action

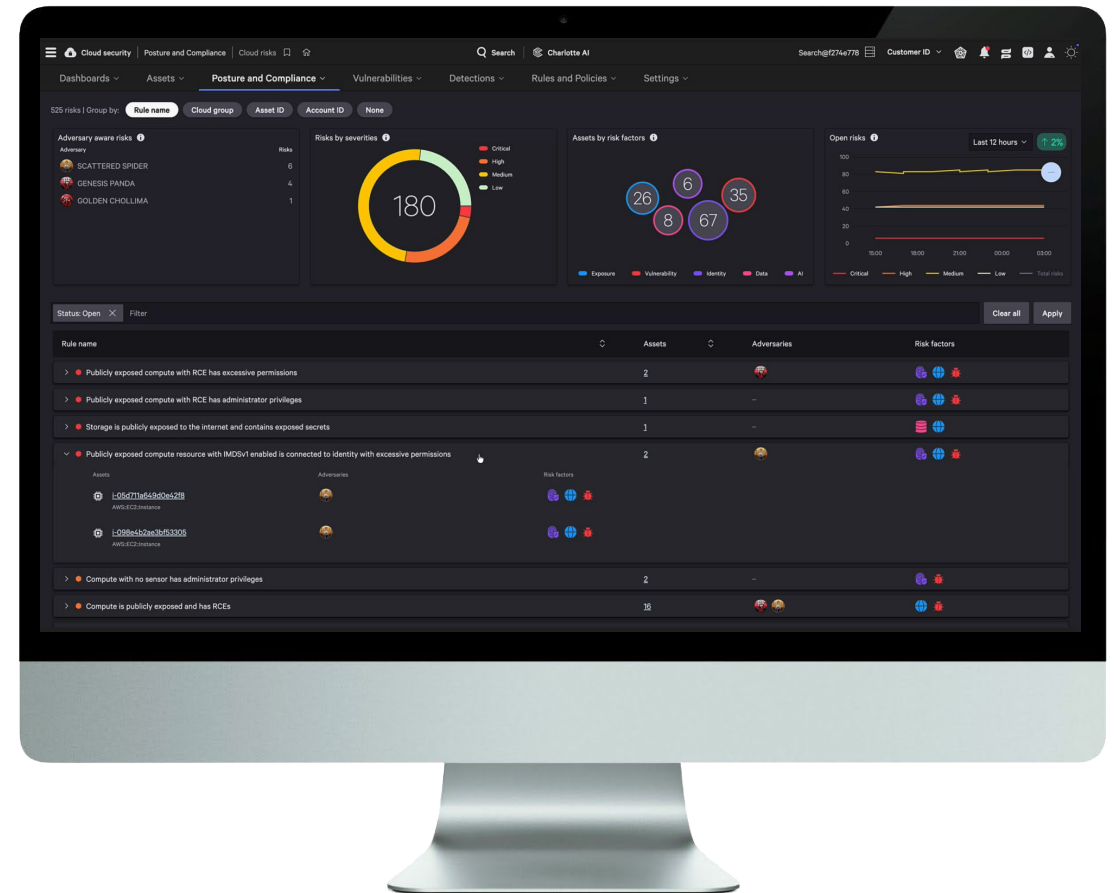

KPMG deploys, integrates and operationalises CrowdStrike capabilities through workflows, playbooks, governance and team enablement.

Output

Connected visibility, actionable security context and embedded detection, investigation and response processes.

Impact

A scalable cyber defence capability that strengthens protection, response and operational resilience.

Strengthen protection against modern threats

Discover how CrowdStrike and KPMG can connect technology, operations and specialist support to strengthen modern threat protection.

Consider a discussion if your organisation is:

- Expanding protection across identity, endpoint and cloud environments
- Strengthening detection, investigation and incident response capabilities
- Improving resilience against ransomware and account compromise

Book a demo to identify and prioritise your critical security risks.

Hu Tsun Hao

**Associate Director, Cyber,
KPMG in Singapore**

tsunhaohu@kpmg.com.sg

CrowdStrike Provides the Platform. KPMG Delivers the Outcomes.

A joint proposition combining modern threat protection technology with implementation, operationalisation and sustained capability uplift.

VISIBILITY TO GOVERNANCE

CROWDSTRIKE

Unified protection and actionable security context

- 1 AI-native cybersecurity platform
- 2 Visibility across endpoint, identity, cloud and data
- 3 Detection, investigation and response capabilities
- 4 Automation and integration across security workflows

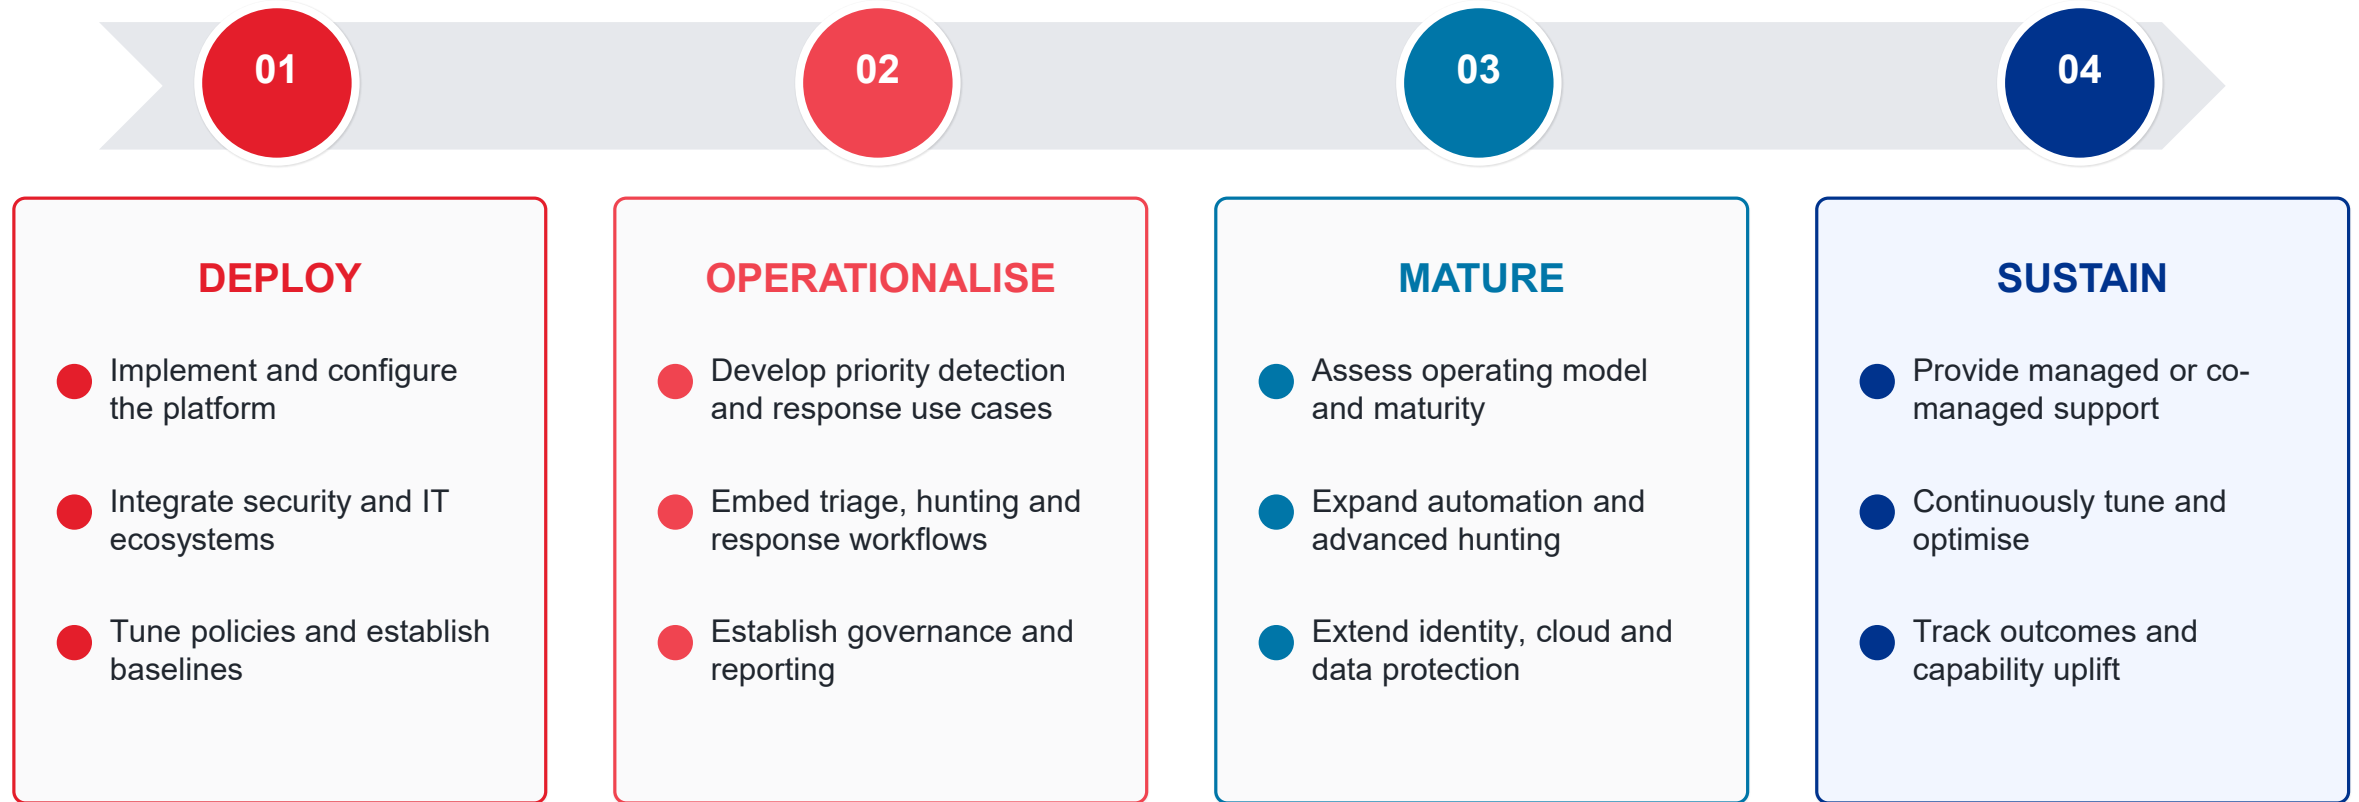

KPMG

Advisory, implementation and operationalisation

- ✓ Define operating model and priority use cases
- ✓ Integrate into SOC, IR and risk processes
- ✓ Build playbooks, workflows and governance
- ✓ Train teams and support managed operations
- ✓ Measure outcomes and improve maturity

From Platform Deployment to Sustained Modern Threat Protection

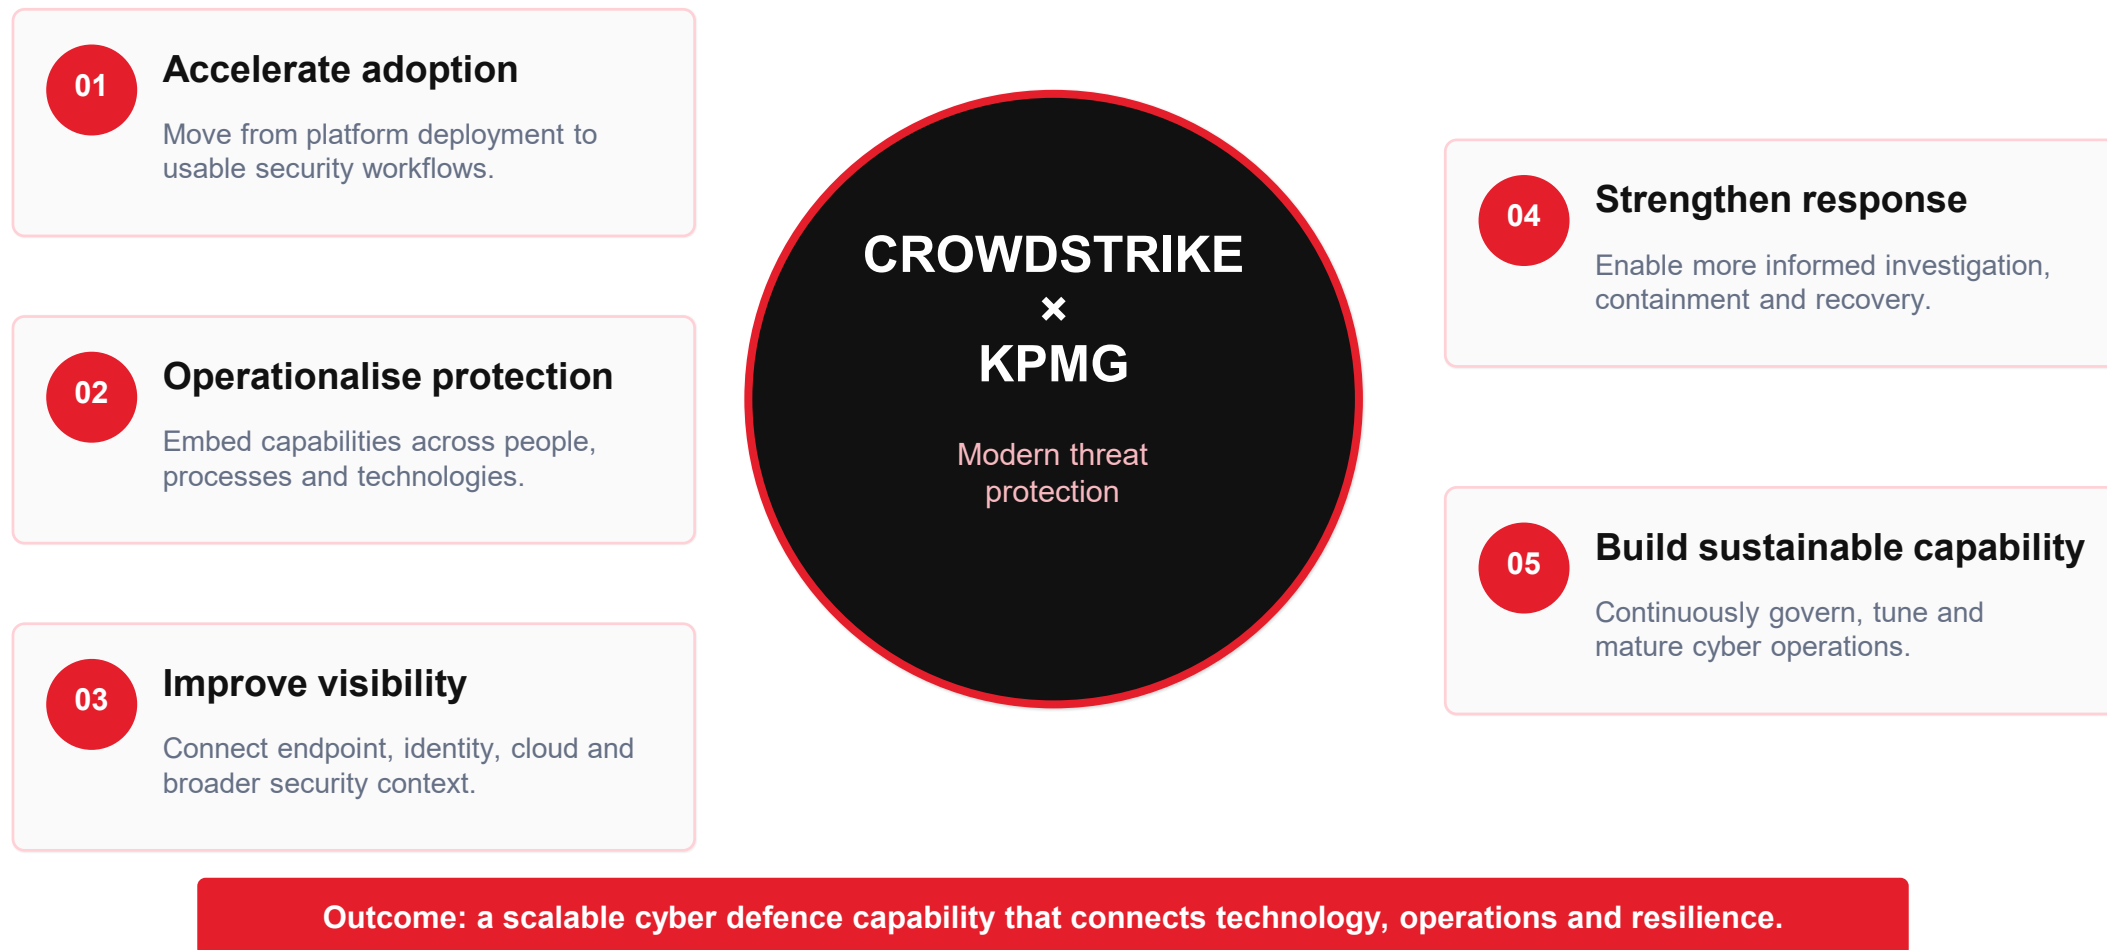

A structured journey to embed CrowdStrike across technology, processes and teams.

KPMG supports value realisation from implementation through long-term operations.

The Partnership Converts Technology into Sustainable Cyber Outcomes

Platform capability, operating model and specialist support combine to strengthen modern threat protection.
